9**Understanding Business Requirements**

Project: AI-Powered Lead Generation System

1. Project Overview

The AI-Powered Lead Generation System is designed to help businesses identify, manage, and prioritize potential customers (leads). The system uses Salesforce and AI capabilities to analyze customer data and improve the lead management process.

2. Business Goals

- Improve the process of identifying potential leads
- Organize customer information in a centralized system
- Help the sales team prioritize leads with higher conversion potential
- Increase efficiency in lead tracking and management

3. Stakeholders

The main stakeholders involved in this system include:

- Sales Team
- Marketing Team
- CRM Administrators
- Business Managers

These stakeholders use the system to manage leads and improve decision-making.

4. Key Requirements

The system should be able to:

- Store lead details such as name, company, email, and phone number
- Track the status of each lead
- Automate tasks using Salesforce flows and validation rules
- Generate AI-based summaries for better insights

5. Expected Outcome

The system will provide a structured Salesforce environment that improves lead tracking, enhances sales productivity, and increases the chances of converting leads into successful customers
