Defining Project Scope and Objectives

Project: AI-Powered Lead Generation System

1. Project Scope

The scope of the AI-Powered Lead Generation System is to create a Salesforce-based application that helps businesses manage and analyze potential customer leads. The system will store lead information, track their progress, and automate certain processes using Salesforce features.

The project focuses on implementing lead management functionalities such as data organization, workflow automation, and AI-based insights to improve sales efficiency.

2. Project Objectives

The main objectives of this project are:

- Develop a Salesforce system for managing customer leads
- Organize and store lead information in a structured format
- Track the progress and status of potential leads
- Use automation tools such as flows and validation rules
- Generate AI-based summaries to assist the sales team

3. Project Deliverables

The expected deliverables of this project include:

- Salesforce lead management setup
- Custom objects, fields, and tabs
- Automation using flows and validation rules
- AI-based lead summary generation
- Project documentation and demo video

4. Expected Benefits

This system will help businesses manage leads efficiently, improve decision-making, and increase the chances of converting leads into customers.
